

Community Grocery App - Recommended Tech Stack & App Name Ideas

This document summarizes the recommended free and scalable tech stack for the community-based weekly grocery aggregation platform along with suggested app name ideas.

1. Mobile Application

- React Native for Android/iOS development
- Single codebase for faster development
- Play Store deployment support
- Recommended UI libraries: React Native Paper or NativeBase

2. Backend

- Spring Boot backend application
- REST APIs for products, orders, notifications
- Spring Security with JWT authentication
- Maven build system

3. Database

- PostgreSQL recommended for lower hosting cost
- Neon PostgreSQL free tier for hosting
- Oracle DB possible if enterprise preference exists

4. Hosting

- Render free tier for Spring Boot backend hosting
- Backend may sleep after inactivity on free plan
- Neon free PostgreSQL hosting
- GitHub for source code hosting

5. Notifications

- Firebase Cloud Messaging (FCM)
- Push notifications for weekly order updates
- In-app notifications support

6. Image Hosting

- Cloudinary free tier

- Store product images and banners

7. CI/CD & Deployment

- GitHub Actions for automated deployment
- Play Store deployment for Android app

8. Hosting Cost Explanation

Render free hosting puts the backend server into sleep mode after inactivity. When no users access the application for some time, the backend pauses to save resources. When the next user opens the app: - Spring Boot backend wakes up - Database reconnects - Application becomes active again This can take around 20–60 seconds on free hosting. The PostgreSQL database itself usually remains active and does not sleep. For MVP and small gated community usage, free hosting is generally sufficient.

9. Recommended App Name Ideas

- FreshNest
- CommunityKart
- FarmCircle
- FreshBatch
- WeeklyBasket
- FarmLane
- GreenCart Weekly
- FreshDoor
- Farm2Flat
- BulkBasket
- HarvestHub
- FreshGated
- WeekendBasket
- FarmFlow
- FreshRoute

Component	Recommended Technology
Mobile App	React Native
Backend	Spring Boot
Database	PostgreSQL
Backend Hosting	Render
Database Hosting	Neon
Notifications	Firebase Cloud Messaging
Image Storage	Cloudinary

Source Control	GitHub
